### Important Terms & Definitions

<b>Customer Charge</b>	Customer Charge covers our cost to keep an electric account open, including metering and billing services, and is not dependent on the amount of electricity used.
<b>Distribution / Access Charge</b>	Distribution / Access is the local delivery of electricity to retail customers. This portion of the rate covers the cost to build and maintain the local electric system, including substations, transformers, poles, wires, as well as other consumer services.
<b>Transmission Charge</b>	Transmission Charge covers the utility's costs to move bulk electricity from power plants, over the transmission lines owned jointly by power plants and utilities, to local substations.
<b>Generation Charge</b>	Generation charge pays for the electric current produced at power plants. These cover two general categories of expenses: energy costs and capacity costs.
<b>Purchase Power Adjustment</b>	This is a difference between the average Purchased Power Cost for the preceding quarter and the Purchased Power Base Cost. It is calculated on a quarterly basis, as a charge or a credit, in order to levelize monthly fluctuations in power costs.
<b>Hydro Credit</b>	Hydro Credit savings are passed to our residential customers as a benefit from the Niagara Hydro Project.
<b>Primary Service</b>	Primary Service designates customers owning high voltage equipment and taking energy with a demand of 100 KW or more.
